			managementy. After improving his condition, discharge given with advice											
48	49	49	B/O Hafsa, 27 days old infant, 2nd issue of his non-consanguineous parents, admitted into our hospital with the complaints of dribbling of urine since birth, crying during micturition and passage of reddish colour urine for last 3 days. with these complaints he admitted into our hospital and then shifted into CCND. AT admission into CCND his S. Creatinine was 4 and other biochemical parameter were not within normal range. After admission into CCND we found, he was conscious, afebrile, edematous, irritable, reflex activity was moderate, anemia, jaundice, dehydration was absent. vitals were normal. Abdomen was soft, distended, kidneys were ballotable, urinary bladder was not palpable. Liver spleen was not palpable. R/R was 38b/min. Breath sound was vesicular. Transmitted									MOU	2024-11-04 07:12:09	2024-11-05 04:48:18

id	patient_prescription_id	patient_infor_id	sailent_fratu_re	provisional_diagnosis	differential_diagnosis	significant_background_history	current_complain	current_investigation	current_treatment	current_plan	confirmatory_diagnosis	created_by	created_at	updated_at
			present. Other systemic examination revels within normal limit. So, our diagnosis was AKI due to obstructive ur5opathywith Metabolic acidosis with hyponatremia. We treat him with conservative management (frusemide, sodium bicarbonate). After improving his condition (S.Creatining was decreasing from previous) we shift him into ward. Few days after shifting into ward, he developed severe hyponatremia and again shifted into CCND for correction of Electrolyte imbalance. During staying into CCND, he developed sepsis (Blood C/S- KLEBSIELLA). After improving his biochemical report, he transferred into ward.											
49	50	50	<p>MIM,13 years old girl& nbsp;admitted into our hospital for rituximab therapy. She diagnosed as a case of Nehrotic syndrome since 2019, at her 8 years of age and treated with adequate									MOU	2024-11-05 05:39:33	2024-11-05 06:19:37

			generalized swelling and scanty micturation for last 6 days. He was a diagnosed case of Nephrotic syndrome since october, 2021. Had repetat relapse occur during PDN course. Then his kidney biopsy done which shows MCD BUT become SDNS usually preceded by cough and cold. Initially he treated with cyclosporin but response was poor then MMF was added and achieve complete remission since 2022. These time relapse occur and admitted into our hospital.
